

OP/TECH USA®

QUICK RELEASE PLATE

System Connectors™—Uni-Loop sold separately

Quick-Release plate with Uni-Loop Connector attached to an OP/TECH USA Sling

System Connectors™—Uni-Loop sold separately

Quick-Release plate with Uni-Loop Connector attached to a tripod

¼" - 20 mounting screw with built-in handle fastens to your camera without tools.

OP/TECH USA's **Quick Release Plate** is compatible with Arca-Swiss mounting systems. It is the ideal accessory for attaching your camera to an OP/TECH USA strap or harness. Using our System Connectors™—Uni Loop you can change between wrist straps, shoulder slings and harnesses in just a few seconds.

The **Quick Release Plate** is made of high-grade aluminum. The top surface features rubberized gripping pads to keep your camera from slipping. The mounting screw has its own built-in folding handle so no tools are needed to apply it to your gear. It can be mounted in any of the three provided slots so you're sure to find one to fit your camera.

To attach a System Connectors™—Uni-Loop (sold separately):

1. Flatten the webbing and slide it through the slot
2. Pass the plastic connector through the webbing loop
3. Pull the connector to tighten the knot.

You can now attach the **Uni-Loop Connector™** to a compatible OP/TECH USA strap, sling, or harness (see above).
